

Emergency Planning and Response

PREPARE

[MANAGE]

MITIGATE

While many communities and businesses have experience planning for the impacts of natural disasters, major accidents and other emergencies, the COVID-19 outbreak has highlighted the need for businesses to be prepared for the significant operational disruptions from unexpected crisis such as global pandemics.

As a trusted advisor, TRC helps to guide our clients through disaster planning and recovery. We understand your goals and embrace them as our own, applying our unmatched creativity and depth and breadth of knowledge with core values such as integrity to assess and safeguard your operations, achieve compliance and build resiliency.

Our highly experienced and qualified staff will assess, prioritize and develop plans to manage and respond to emergencies. We're committed to not only designing prevention methods to avoid future disruptions, but also supporting you by remediating and restoring any damage that may have occurred from current or past disasters.

With a team of multi-disciplinary professionals, we utilize modern, cutting-edge technology to design appropriate solutions to get you operational again. And if a disaster has caused large losses, we have extensive experience working with insurers, as well as policy holders, to provide defensible data and documentation to assist in claims processing.

Regardless of where you are in your response to the COVID-19 outbreak, TRC can help you restore your business and prepare for the unknowns that lie ahead.

**“PLAN FOR DAYS, RESPOND IN
MINUTES AND SUCCEED FOREVER.”

Minimize the risk of unexpected business disruptions.

Planning and Preparedness

When disaster strikes, your ability to bounce back quickly depends on how well you planned for an emergency and how prepared you are to take action. TRC helps you get ready for any incident that might impact your business or agency.

Emergency Operations Plans: We work with you to develop this essential playbook which will guide your response when a crisis emerges. Whether it's an active shooter, fire, hurricane or pandemic, these plans identify actions, resources, responsible staff and dependencies in advance so you can be successful when the time comes.

Continuity of Operations Plans: We'll help you determine which operations are mission critical during disaster and plan for how to keep those functions going by prioritizing business activities and appropriately allocating staff, supplies and other resources.

Training and Exercises: Educating staff and management about crisis issues and policies and is essential, as is testing that knowledge through real world, simulated exercises. Our team can guide you through table-top, functional and complex, full scale training.

Mitigation

Being prepared for an emergency includes planning for and implementing measures to make the impact less severe. TRC supports the development of mitigation efforts that help reduce your risk.

Infrastructure Redesign: It is important to evaluate the vulnerability of buildings or other infrastructure in the case of disasters such as storms or earthquakes. Our experts can help you redesign layouts or provide complex structural retrofits to reduce impacts and meet compliance requirements.

Educational Programs: We'll help you provide the reasoning behind various policies, procedures and training programs so employees understand not only what they are being asked to do, but why.

Risk Assessments, Security Assessments and Design: Working together, our team can help you pre-emptively identify vulnerabilities and areas where unacceptable risks are present so you can take steps to reduce the impact.

Response

Once a crisis hits, how you respond will determine how quickly you can return to operating normally. TRC supports a range of activities that are essential to overcoming emergency situations.

Disinfection, decontamination and industrial hygiene testing: When highly contagious pathogens emerge, standard cleaning protocols are not enough. Our team uses innovative testing procedures that can instantly assess the cleanliness of various surfaces and indicate where immediate corrective action is needed.

Debris Management: After a disaster happens, you may be left with a big mess to clean up. We can help you manage any residues that may not be "landfill ready" and require special handling and disposal.

Logistics Support: Critical devices, equipment and supplies need to be moved quickly in an emergency. Our team specializes in managing inventories, transportation and distribution of vital resources.

Grants Support: Applying for disaster relief and other federal and local grants is complicated and requires a lot of paperwork that must be submitted in a timely manner. We can help you navigate this process and secure the funds you need to restore your business.

Why TRC?

We put clients first by:

- Envisioning new possibilities and engineering sustainable solutions
- Creating collaborative work relationships that drive better results
- Anticipating issues and quickly resolving them
